Simple Jenkins Pipeline Practical

Objective

To create and run a simple Jenkins pipeline without using Git or Docker.

Description

This pipeline demonstrates a simple Jenkins CI/CD workflow with three stages: Build, Test, and Deploy. It executes basic steps using pipeline script without integrating Git or Docker.

Prerequisites

1. Jenkins installed and running
2. Basic understanding of pipeline concept

Steps

1. Open Jenkins Dashboard (http://localhost:8080)
2. Create a new Pipeline job named 'simple-pipeline'
3. Add pipeline script
4. Save and run the pipeline
5. Check console output

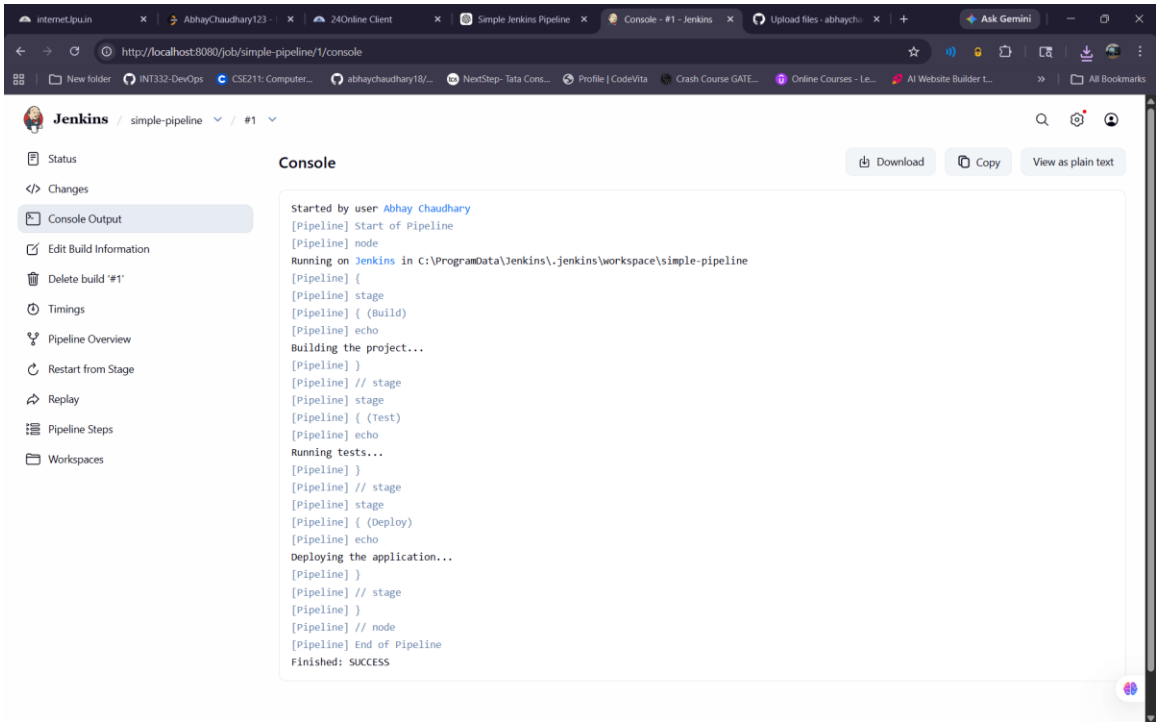
Pipeline Script

```
pipeline {
  agent any
  stages {
    stage('Build') {
      steps {
        echo 'Building the project...'
      }
    }
    stage('Test') {
      steps {
        echo 'Running tests...'
      }
    }
    stage('Deploy') {
      steps {
        echo 'Deploying the application...'
```

```
        }
    }
  }
}
```

Expected Output

Building the project...
Running tests...
Deploying the application...
Finished: SUCCESS

Conclusion


Successfully created and executed a simple Jenkins pipeline. All stages executed successfully and output was verified through console logs.
